Summary

I am a computer enthusiast with a solid background in Web/Blockchain development. I have experience with writing smart contracts for Blockchain interactions and building web interfaces. With my acquired skill set, I will devote all my focus and strength to completing the given task. With a solid background in my field, I will build high-quality products to be used by millions.

Skills

- ReactJS
- NextJS
- NodeJS
- Solidity
- EtherJS
- MongoDB/Firebase
- JQuery
- SEO
- Content Writing
- QATester
- Typescript
- Firebase
- Superbase
- Websocket
- NextJS

Work Experience

Core Developer — BGC Labs, Remote

08/2024 – 07/2026 | Lagos, Nigeria

BlockBot is an AI-powered crypto chatbot platform focused on enabling users to send, manage, and interact with crypto directly through WhatsApp.

Responsibilities & Contributions:

- Built and maintained frontend interfaces using ReactJS and TypeScript for chat-driven crypto onboarding experiences.
- Integrated blockchain transaction flows for Arbitrum Sepolia and Avalanche Fuji testnets.
- . Worked on Firebase-powered backend integrations for real-time data handling and user interaction management.
- Collaborated on SDK-focused tooling aimed at simplifying Web3 onboarding for developers and non-technical users.
- Helped improve accessibility and usability for blockchain interactions through chat-based user experiences.

Technologies Used:

TypeScript, ReactJS, NodeJS, Firebase, JavaScript

Education

Certificate in Software Engineering,

ITSkills Training Center

Lagos, Nigeria

Completed professional IT training, gaining knowledge in computer systems, software applications, troubleshooting, networking fundamentals, and modern technology tools.

Certificate in ReactJS, Mygreatlearning.com

03/2024 | Online

Certificate in NodeJS, Javascript, Solidity, and Typescript, W3schools.com

03/2023 | Online

Projects

OneTrip ,

Smart Transport & Route Optimization Platform

- Developed a smart transportation platform focused on helping users compare transport fares and discover optimized travel routes across Nigeria.

Languages

- English

- Designed and implemented route comparison systems that simplified transport decision-making for users.
- Integrated backend services with NodeJS and MongoDB for efficient storage and retrieval of route and fare data.
- Helped position the platform as a modern travel utility tailored toward Nigeria's growing digital transportation ecosystem.

Technologies:

ReactJS, NodeJS, JavaScript, MongoDB

Creepstar , *Solana Analytics Dashboard*

- Developed a Solana ecosystem analytics dashboard for tracking crypto tokens and market activity.
- Built responsive frontend interfaces for viewing token market capitalization and ecosystem metrics.
- Improved accessibility to blockchain market data for Web3 users and crypto enthusiasts.
- Technologies: ReactJS, JavaScript, API Integration

TeamFlow , *Built a full-stack team collaboration and workflow management platform designed to streamline how teams plan, assign, and track work in real time.*

- Developed a collaborative workspace platform for managing projects, tasks, and team communication in one unified system
- Implemented Kanban-style task management for organizing and tracking project progress efficiently
- Integrated project organization workflows to improve visibility, accountability, and task distribution

Tech Stack: React, TypeScript, Node.js , Express , Tailwind CSS , Vercel

Norelix , *Built a modern payment gateway platform designed to enable secure, fast, and scalable online payment processing for digital businesses.*

- Developed a payment gateway system enabling merchants to accept and process online transactions efficiently
- Implemented a secure payment flow architecture with focus on encryption, transaction integrity, and data protection
- Designed a clean checkout and payment interface optimized for conversion and user experience
- Integrated API-driven architecture to support scalable and modular payment operations.

Tech Stack: React, TypeScript, Node.js , Express , Tailwind CSS, Vercel
